# DEVELOPER HANDOFF

For Mas Panji & Mas Yoni | Hackathon Prep | 22 April 2026

*Everything you need to set up before we fly tomorrow.*

## 1. Monday.com — Hackathon Workspace

**Action:** Create a new workspace called “Hackathon Demo” in our Monday.com. Clone the Deals board structure with 3–5 sample deals. This keeps our production CRM clean.

### Deals Board Schema (from our actual CRM)

Our current Deals board has these columns. For the hackathon demo board, use the same column IDs so the MCP code works against both demo and production:

| Column | Type | Column ID | Notes for Demo |
|---|---|---|---|
| **Name** | name | name | Deal name (e.g. “PT Astra Insurance — OCR Pilot”) |
| **Stage** | status | deal_stage | Use: Open, First Meeting Done, Piloting, Solutioning, Waiting Confirmation, [Won] Waiting Signature, Implementation Done, Lost |
| **Owner** | people | deal_owner | Assign to Indi or David |
| **Deal Value** | numbers ($) | deal_value | Realistic values: $5,000–$50,000 |
| **Expected Close Date** | date | deal_expected_close_date | Mix of past due + upcoming dates |
| **Incurred (IDR jt)** | numbers | numeric_mm1bdpzy | Sample: 150–500 |
| **Excess / Rejected (IDR jt)** | numbers | numeric_mm1bkxy8 | Sample: 10–80 |
| **Approved (IDR jt)** | numbers | numeric_mm1b64b7 | Sample: 100–450 |
| **OP %** | numbers | numeric_mm1bq8yc | Sample: 70–90 |
| **IP %** | numbers | numeric_mm1bek79 | Sample: 10–30 |
| **Monthly Claim Vol** | numbers | numeric_mm1bmx9t | Sample: 50–500 |
| **Members Covered** | numbers | numeric_mm1bx91m | Sample: 200–5000 |
| **Pricing Model** | dropdown | dropdown_mm1b79r5 | Per Claim / Per Member / Subscription / Mixed / TBD |
| **Last Proposal Date** | date | date_mm1bpvvx | Recent dates for some, empty for others |
| **Last Proposal Link** | link | link_mm1bdc0e | Point to Google Drive sample folder |

## Sample Deals to Create (5 deals)

| Deal Name | Stage | Value | Close Date | Claim Vol | Members |
|---|---|---|---|---|---|
| **Nusantara Life — OCR Pilot** | Piloting | $25,000 | 2026-05-15 | 200/mo | 3,000 |
| **Buana Sejahtera Insurance — FWA Module** | First Meeting Done | $15,000 | 2026-06-01 | 150/mo | 2,000 |
| **Mega Proteksi Life — Full Suite** | Solutioning | $45,000 | 2026-05-30 | 500/mo | 5,000 |
| **Sentosa Health Insurance — STP** | Waiting Confirmation | $30,000 | 2026-04-30 | 300/mo | 4,000 |
| **Garuda Insurance — OCR Only** | Lost | $10,000 | 2026-03-15 | 80/mo | 800 |

### Important

Use fictional company names if you prefer — but keep the numbers realistic. The judges will ask about scale. Having 5 deals with realistic insurance data makes the demo credible.

# 2. Google Drive — Sample Folder

**Action:** Create this folder structure in Google Drive. Pick one client (e.g. PT Astra Insurance) and populate with sample files.

Folder structure:

```
Hackathon Demo/
   PT Astra Insurance - OCR Pilot/
      Meeting Notes/
         2026-04-10 - Discovery Call - MOM.pdf
         2026-04-18 - Technical Review - MOM.pdf
      Proposals/
         Sembuh AI - Astra - Proposal v1.pdf
      Quotations/
         Sembuh AI - Astra - Quotation v1.xlsx
      Pricing/
         Sembuh AI - Astra - Pricing Internal.xlsx
```

The meeting notes folder is critical — these are the sample transcripts/MOMs that the agent will process during the demo.

# 3. Templates Needed

These are the output templates the agent will generate. Indi will share existing templates where available. For any missing ones, create minimal versions using the specs below.

## 3a. Quotation Template

| Field | Description |
|---|---|
| **Client Name** | Auto-filled from Monday.com deal name |
| **Date** | Auto-filled (today's date) |
| **Quotation Number** | Format: SBH-Q-YYYY-NNN |
| **Product/Service** | Mapped from Sembuh AI modules: OCR, FWA, STP Underwriting |
| **Pricing Model** | Per Claim / Per Member / Subscription (pulled from CRM) |
| **Unit Price** | Based on pricing model and volume tier |
| **Volume** | Monthly claim volume or member count from CRM |
| **Total** | Calculated: unit price × volume |
| **Validity** | 30 days from issue date |
| **Terms & Conditions** | Standard Sembuh AI T&C block |

## 3b. Pricing Internal Template

This is an internal-only document. Not shared with clients. Used for margin analysis.

| Field | Description |
|---|---|
| **Client Name** | From CRM |
| **Product Module(s)** | OCR / FWA / STP / Full Suite |
| **Volume Estimate** | Monthly claim vol + members covered |
| **Proposed Price** | What we're quoting the client |
| **Cost Basis** | Our internal cost per transaction/member |
| **Gross Margin %** | Calculated: (price - cost) / price × 100 |
| **Revenue Forecast** | Monthly + annual projected revenue |
| **Competitor Benchmark** | What competitors charge (if known) |
| **Discount Applied** | Any discount from standard pricing |
| **Approval Status** | Needs CEO / auto-approved (based on margin threshold) |

## 3c. Proposal Template

This is client-facing. The agent drafts 80%, human reviews before sending.

| Section | Content |
|---|---|
| **Cover Page** | Sembuh AI logo, client name, date, "Proposal for [Product]" |
| **Executive Summary** | 1 paragraph: client pain point + our solution + expected impact. Auto-generated from MOM + CRM context. |
| **Client Context** | Pulled from CRM: members covered, claim volume, current pain points from meeting notes. Enriched with Genspark Deep Research (company size, industry context). |
| **Proposed Solution** | Which Sembuh AI modules address their needs. Mapped from meeting discussion: OCR, FWA, STP Underwriting. |
| **Implementation Plan** | Standard 4-week timeline: Week 1 setup, Week 2 integration, Week 3 testing, Week 4 go-live. |
| **Pricing** | Summary table pulled from quotation. No internal margin data. |
| **Why Sembuh AI** | Standard company differentiators block. |
| **Next Steps** | Auto-generated from MOM: identified next actions + proposed timeline. |

# 4. Deal Health Monitoring — Parameters

**This is the recommended scoring system.** The agent reads all deals from Monday.com, applies these rules, and outputs a health score (0–100) with a plain-language reason per deal.

## Health Score Rules (100 = healthy, 0 = critical)

| Rule | Deduction | Data Source | Logic |
|---|---|---|---|
| **No activity in 7+ days** | −30 pts | Last contact date | If no update, meeting, or stage change in 7 days |
| **No activity in 14+ days** | −50 pts | Last contact date | Critical: deal is likely going cold |
| **Stuck in same stage 21+ days** | −25 pts | Stage + stage change date | Deal hasn't progressed in 3 weeks |
| **Expected close date passed** | −20 pts | Expected Close Date | Close date is in the past, deal still open |
| **No owner assigned** | −15 pts | Owner column | Orphaned deal — nobody is driving it |
| **Deal value empty** | −10 pts | Deal Value | Can't forecast without a value |
| **No proposal sent** | −10 pts | Last Proposal Date | Pipeline stage is Solutioning+ but no proposal on file |
| **High excess rate (>30%)** | −10 pts | Excess Rate % formula | Client has high claim rejection — risk flag |

## Health Score Tiers

| Score | Status | Action |
|---|---|---|
| **80–100** | **Healthy (Green)** | On track. No action needed. |
| **50–79** | **At Risk (Amber)** | Needs attention. Flag to owner + suggest next action. |
| **0–49** | **Critical (Red)** | Immediate intervention. Notify owner + manager via Slack. |

## Sample Output (what the agent should produce)

Example deal health output for the demo:

| Deal | Score | Status | Reason |
|---|---|---|---|
| **Astra Indo — OCR Pilot** | **85** | **Healthy** | Active engagement. Last meeting 4 days ago. On track for May close. |
| **BRI Life — FWA Module** | **45** | **Critical** | No activity in 16 days. Still at First Meeting Done. No proposal sent. Owner needs to schedule follow-up. |
| **Prudential ID — Full Suite** | **70** | **At Risk** | Expected close date is May 30 but no proposal on file yet. Stage is Solutioning. |

| | | | |
|---|---|---|---|
| **AIA Indonesia — STP** | **60** | **At Risk** | Waiting Confirmation for 18 days. Close date April 30 approaching. Follow up with decision maker. |
| **Allianz Life — OCR Only** | **0** | **Lost** | Deal marked as Lost. |

# 5. High Level Report — Spec

Weekly/monthly executive summary auto-generated from Monday.com data. For the hackathon, we mock this with pre-loaded data and show the output format.

## Report Sections

| Section | Content + Data Source |
|---|---|
| **Pipeline Summary** | Total deals by stage (count + total value). Bar chart or table. Source: Deals board grouped by deal_stage. |
| **Revenue Forecast** | Weighted pipeline value by stage: Piloting (30%), Solutioning (50%), Waiting Confirmation (70%), Won (100%). Source: deal_value × stage weight. |
| **Conversion Funnel** | How many deals moved between stages this period. Source: stage change history. |
| **Stale Deals Alert** | Deals with health score < 50. Table with deal name, score, reason. Source: Deal Health Monitor output. |
| **Top Actions This Week** | Top 5 deals needing attention + recommended next action. AI-generated from health scores + CRM context. |
| **Win/Loss Summary** | Deals closed won vs lost this period. Win rate %. Source: deals in Closed Won group vs Lost stage. |
| **Average Time per Stage** | How long deals spend in each stage. Identifies bottleneck stages. Source: stage change timestamps. |
| **Key Narrative** | LLM-generated 2–3 sentence summary: e.g. “3 deals stalled at Solutioning stage. Common blocker: IT security review. Recommend: prepare security compliance one-pager.” |

## Key Metrics to Display

| Metric | Calculation | Display |
|---|---|---|
| **Total Pipeline Value** | Sum of all active deal_value | Big number card: e.g. $125,000 |
| **Weighted Pipeline** | Sum of (deal_value × stage probability) | Big number card: e.g. $67,500 |
| **Active Deals** | Count of deals not Lost/Won | Number: e.g. 16 |
| **Avg Deal Size** | Pipeline value / active deals | Number: e.g. $7,800 |
| **Win Rate** | Won / (Won + Lost) × 100 | Percentage: e.g. 62% |

| | | |
|---|---|---|
| **Avg Days to Close** | Avg time from Open to Won | Number: e.g. 45 days |
| **Deals at Risk** | Count with health score < 50 | Number with red highlight |
| **Pipeline Coverage** | Weighted pipeline / quota | Ratio: e.g. 2.1x |

### For the Hackathon

Stage 4 (Deal Health) and Stage 5 (Report) will be partially mocked. Load the 5 sample deals into Monday.com, run the health scoring once, and show the output as a Genspark AI Sheets dashboard or a web page built with Genspark AI Developer. The data is real enough to demo convincingly — judges will see real CRM data being analysed, not a slide.

## 6. Tonight's Setup Checklist

| # | Task | Owner | Est. Time |
|---|---|---|---|
| 1 | Create "Hackathon Demo" workspace in Monday.com | **Panji** | 10 min |
| 2 | Clone Deals board with columns above | **Panji** | 15 min |
| 3 | Add 5 sample deals with realistic data | **David** | 15 min |
| 4 | Create Google Drive sample folder (1 client) | **Indi** | 10 min |
| 5 | Upload/create sample MOM transcript (1–2 files) | **Indi** | 15 min |
| 6 | Set up Claude API key + test MCP connection | **Panji** | 15 min |
| 7 | Create Genspark accounts (both devs) | **Yoni** | 10 min |
| 8 | Test Genspark AI Developer (build a hello world page) | **Yoni** | 15 min |
| 9 | Scaffold boilerplate code / repo | **Panji** | 20 min |
| 10 | Create minimal quotation + proposal template (gwnspark) | **Indi** | 20 min |

**Total estimated setup time: ~2.5 hours.** Do this at the hotel tonight (22:00–00:30). Panji and Yoni can work in parallel.

*Prepared: 22 April 2026*
